```
CC treatment (MDDT) polypeptide (I) selected from a polypeptide having a CC sequence selected from 254 sequences (ABDT21-ABP51844) given in the CC specification, a naturally occurring polypeptide comprising a sequence CC immunogenic fragment of (I). (I) or a biologically active or CC immunogenic fragment of (I). (I) is useful for screening a compound that CC specificatly binds (I) or modulates the activity of (I), and for CC preparing a polyclonal or monoclonal antibody by hybridoma technology. CC Nucleic acids (II) (AB072449-AB072700) encoding (I) are useful for CC screening a compound for effectiveness in altering expression of a target CC polynucleotide comprising. Oligonucleotides and antibodies are useful for CC detecting MDDT in a sample or for assessing toxicity of a test compound, CC in a diagnostic test for a condition or a disease associated with the CC expression of MDDT in a biological sample, for detecting (I) an associated with decreased or increased expression of functional MDDT. (I) or (II) are useful for treating a disease or condition CC associated with aberrant expression of MDDT, where the disorders are selected from a cell proliferative disorder such as arteriosclerosis, associated with aberrant expression of MDDT, where the disorders are cirrhosis, hepatitis, psoriasis, and cancer and an CC autoimmune/inflammatory disorder such as AIDS, Addison's disease, cirrhosis, hepatitis, psoriasis, and cancer and an CC allergy, anaemia, asthma, atherosclerosis, gout, multiple sclerosis or rheumatoid arthritis. (II) are useful for creating knockin humanised or type, for detecting differences in the chromosomal location due to CC and as hybridisation probes for mapping naturally occurring genomic CC and as hybridisation probes for mapping naturally occurring genomic

                                                                                      망
                                                                                                              Qy
                                                                                                                                                                                                                 CC The invention relates to an isolated human disease detection and CC treatment (MDDT) polypeptide (I) selected from a polypeptide having a CC sequence selected from 254 sequences (ABP51231-ABP51484) given in the CC specification, a naturally occurring polypeptide comprising a sequence CC immunogenic fragment of (I). (I) is useful for screening a compound for CC immunogenic fragment of (I). (I) is useful for screening a compound that CC specifically binds (I) or modulates the activity of (I), and for CC greparing a polyclonal or monoclonal antibody by hybridoma technology. CC Nucleic acids (II) (ABC72449-ABC72700) encoding (I) are useful for CC screening a compound for effectiveness in altering expression of a target CP polynucleotide comprising. Oligonucleotides and antibodies are useful for CC and for purifying (I) from a sample or for assessing toxicity of a test compound. CC in a diagnostic test for a condition or a disease associated with the CC expression of MDDT in a binlogical sample, for detecting (I) in a sample, associated with decreased or increased expression of functional MDDT. CC associated with aberrant expression of MDDT, where the disorders are selected from a cell proliferative disorder such as arteriosclerosis, criminals or transgenic animals, asthma, atherosclerosis, and cancer and an autoimmune/inflammatory disorder such as AIDS, Addison's disease, animals or transgenic animals to model human diseases, in somatic or cell type, for detecting differences in the chromosomal location due to canda subtraction among normals, carrier or affected individuals or canda an animals or transcript image of a tissue or cell candas bubridies for maching normals or conditionals individuals.
                                                                                                                                                                    Query Match

The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzhelmer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, cancer diagnosis and therapy, drug screening assays for receptor activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim

                                                                                                                                                             in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropaths and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinyinhibin activity, chemotactic/chemokinetic activity, hemotactic/chemokinetic activity, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

                          disorder e.g. keratosis, arteriosclerosis, hepatitis, psoriasis, leukaemia; autoimmune disorders e.g. AIDS, allergies, anaemia, asthma, Crohn's disease, dermatitis, Graves' disease, Hashimoto's thyroiditis; neurological disorders e.g. Alzheimer's disease, dementia, meningitis, Creutzfeldt-Jacob disease; gastrointestinal disorders e.g. nausea, reproductive disorders e.g. menstrual disorders, ectopic pregnancy and cancer of the breast and developmental disorders. The present sequence is human INTSIG-16 cDNA.
                                                                                                                                                  The invention relates to an isolated intracellular signalling (INTSIG) polypeptide or a biologically active or immunogenic fragment of INTSIG. INTSIG is also useful for preparing a polyclonal or monoclonal antibody by hybridoma technology. INTSIG gene is useful in gene therapy. INTSIG is useful for treating or preventing disorders such as cell proliferative
                                                                                                                                                                                                                                                                               Novel intracellular signaling polypeptide useful for treating preventing cell proliferative, autoimmune, neurological, gastrointestinal and reproductive and developmental disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                12-OCT-2001;
                                                                                                                                                                                                                                                    Claim
                                                                                                                                                                                                                                                                                                                                                                                                         Thangavelu K,

                                                                                       Query Match
                                                                                                                                                             The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLO1840-ABL18175) and the encoded proteins (ABBS7737-ABB72072).
                                                                                                                                         The sequence data for this patent did not form part of the pri specification, but was obtained in electronic format directly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to novel human guanosine triphosphate (GTP) binding associated proteins (GBAPs; AAB68501-AAB6856) and their coding sequences (AAF58301-AAF58366). The proteins and coding sequences of the present invention are useful for treating a variety of disorders including inflammation, AIDS, Addison's disease, anaemia.

CC comprises: (a) an oligon-dp primer and an oligonucleotide complementary crand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the cC oligonucleotide comprises at least 15 nucleotides; or (b) a combination (c) of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination (c) of an oligonucleotide comprises a sequence complementary to the cC complementary strand of a polynucleotide which comprises a 5'-end cC complementary to a cplynucleotide which comprises a 3'-end sequence, where the cC oligonucleotide comprises a 1'-end sequence, where the cC oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in cC the specification. The primer sets can be used in antisense therapy and cC in gene therapy. The primers are useful for synthesising polynucleotides, catelotial primers are also useful for the cC detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for the cC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CAAH3633 to AAH18742 represent human cDNAs sequences; AAAB92446 to AAH3633 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present oligonucleotides, all of which are used in the exemplification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    27-AUG-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated polynucleotide and encoded polypeptides, use diagnostics, forensics, gene mapping, identification of m responsible for genetic disorders or other traits and to biodiversity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

The gene is isolated from human chromosome lp31. A full-length cDNA clone (see AAV60577) is also claimed. NOEY2 nucleic acids can be used in the recombinant production of NOEY2 polypeptides, in the gene therapy of cancer (especially ovarian and breast-related), and to prepare transgenic animals useful as models of cancer. Fragments of NOEY2 nucleic acids are also used as probes and primers for, diagnosis, including detection of mutations, or as antisense molecules or ribozymes for reducing/eliminating NOEY2 activity. The nucleic acids can also be used to screen for antitumour agents that stimulate NOEY2, overcome lack of this protein or block expression of the protein or block expression or the p

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            QΥ
that shows homology to members of the Ras and Rap family. Differential display PCR was used to isolate and clone the novel gene, and RACE was used to amplify the full-length NOEY2 cDNA from human ovarian surface epithelial cells. A NOEY2 genomic DNA sequence (see AAV60578), isolated from human chromosome 1p31, is also claimed. NOEY2 nucleic acids can be used in the recombinant production of NOEY2 polypeptides, in the gene therapy of cancer (especially ovarian and breast-related cancers), and to prepare transgenic animals useful as models of cancer. Fragments of NOEY2
                                                                                                                                                                         This is the complete NOEY2 cDNA nucleotide sequence. NOEY2 is novel human tumour suppressor gene that is expressed in normal ovarian and breast surface epithelial cells but is consistently
                                                                                                                                                                                                                                                                      New nucleic acid encoding NOEY2 tumour suppressor from ovarian epithelium - useful for, e.g. treatment, diagnosis and prognos cancer, particularly cancer of ovary and breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                 13-JAN-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        acids are also used as probes and primers for diagnosis, ng detection of mutations, or as antisense molecules or es for reducing/eliminating NOEV2 activity. The nucleic an also be used to screen for antitumour agents that the NOEV2, overcome lack of this protein or block expression.

                                                                                                                                                                                                                                                                                                                                                                                                                                         expressed in the bone marrow. The polynucleotide and the polypeptide encoded by it are useful in the treatment of various immune deficiencies and disorders. The deficiencies and disorders may be genetic, may be caused by a viral (e.g. HIV), bacterial or fungal infection, or may result from an autoimmune disorder, a coaquiation disorder (e.g. haemophilia), inhibition of tumour cell proliferation, suppression of an inflammatory response or treatment of a nervous system disorder such as Alzheimer's disease. Detection of the presence or increased expression of the polynucleotide or the protein it encodes is useful for the diagnosis and/or prognosis of one or types of cancer. The polynucleotide and polypeptide can be used as nutritional sources or supplements and in the screening of
                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1144 BP; 220 A; 314 C; 367 G;

                                                                                                                                                                                                                                                                                                                                  amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, alagnose and treat immune/haemarcopoletic-related diseases, especially cancers and cancer methaticas of hometic-telated diseases, especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              08-DEC-2000;

Nucleic acids encoding useful for preventing, metastasis metastasis human immune/hematopoietic antigen polypeptides, diagnosing and/or treating cancers and

Disclosure; SEQ ID No 36046; 3071pp + Sequence Listing; English

CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting CC the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic antigen genomic corrected strom the present invention. AAK54942 to AAK8793 and AAM82169 CC expressent servences used in the exemplification of the prevent in the present invention. sequences used in the exemplification of the present invention the and

Abs raised to these peptides can diagnose associated diseases - absence or excess of the product indicates loss of balance between anti- and oncogenic factors in the cells. The product may be used to treat conditions associated with ras or rap genes.
